

KEY ACHIEVEMENTS

Over **125,000 HECTARES** were put under area enclosures for restoration

384 FMNR groups were established and benefited from selling grass, access to fodder for animals, and fuelwood. Additionally, bylaws and benefit sharing mechanisms were developed.

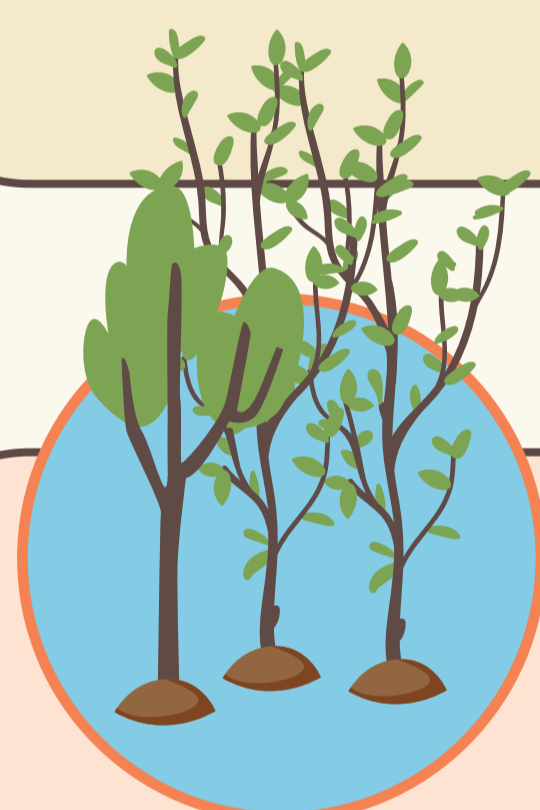

Nearly **20 million tree seedlings** raised and planted with the support of the program

The **establishment of Rural Resource Centers (RRCs)** has created job opportunities for unemployed women and youth

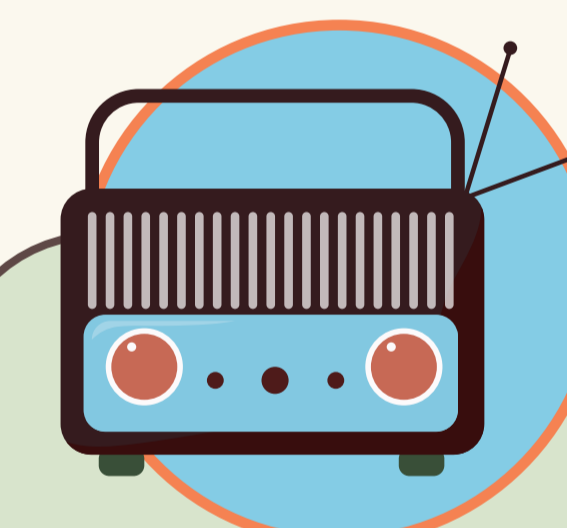

Project support was critical to the formation of the **National Watershed Management and Agroforestry Platform (NWAMP)**. The project created synergies with government stakeholders at National, Zone, and District level.

Tree-based value chain development enterprises in areas targeted for scaling-up were trained and supported with production materials that **generated incomes of USD 5,876**, thereby contributing to improved livelihoods.

The quality and quantity of tree seedlings in government and community nurseries have been improved through better technical training, tree varieties, and material support. There are now some **30,000 government-run tree nurseries** in Ethiopia.

Communication and visibility campaigns reached across the country by the means of radio and television broadcasts and the dissemination of leaflets, posters, brochures, newsletters, and FMNR manuals in local languages.
