

Regreening Africa

Regreening Africa overview

Rwanda SHARED Workshop 12th -13th July

Mieke Bourne Ochieng – Programme
Manager

(with inputs from the Regreening Africa Team)

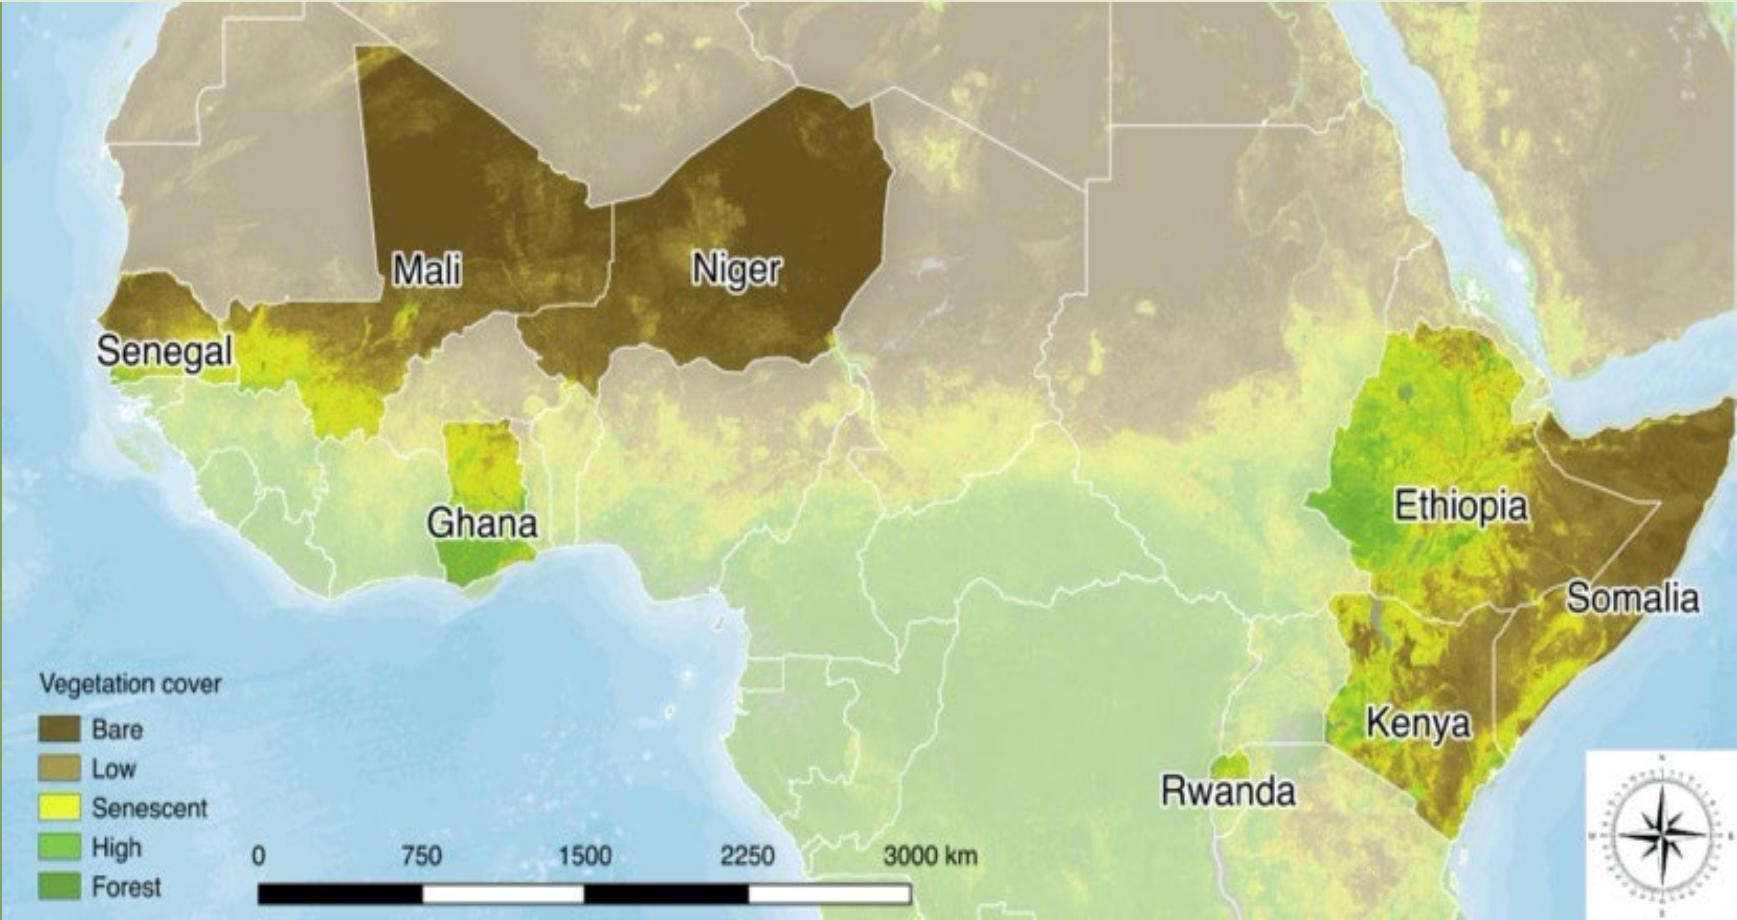

Regreening Africa (2017-2023)

*500,000 households,
across 1 million hectares*

*Incorporating trees into
croplands, communal
lands and pastoral
areas with S&W
conservation and other
practices*

Funded by European Union

Regreening Africa

A unique programme structure

Achievement on targets by September 2021

500,000 HHs: target
401,297 HHs: reached to date
127,073 HHs: verified (uptake surveys)

1,000,000 Ha: target
665,924 Ha: reached to date
311,199 Ha: verified (uptake surveys + App)

Lesson 1

**Practices are varied
and must match local
context**

Nurseries (including indigenous trees)

Tree growing + grafting +
direct seeding

FMNR, ANR + (big return on investment)

Ethiopia: exclosures +

Niger: soil & water conservation +

A woman wearing a red shirt and a checkered apron is holding a young tree sapling in a plastic bag. She is standing in a lush green field with many trees in the background. The scene is brightly lit, suggesting a sunny day. The text "Lesson 2" is overlaid on the left side of the image.

Lesson 2

Address drivers of
degradation and
incentives for
restoration

**Drivers of degradation
such as unsustainable
land use like farming
on
steep land and
deforestation**

Incentives for restoration

Value chains and livelihoods

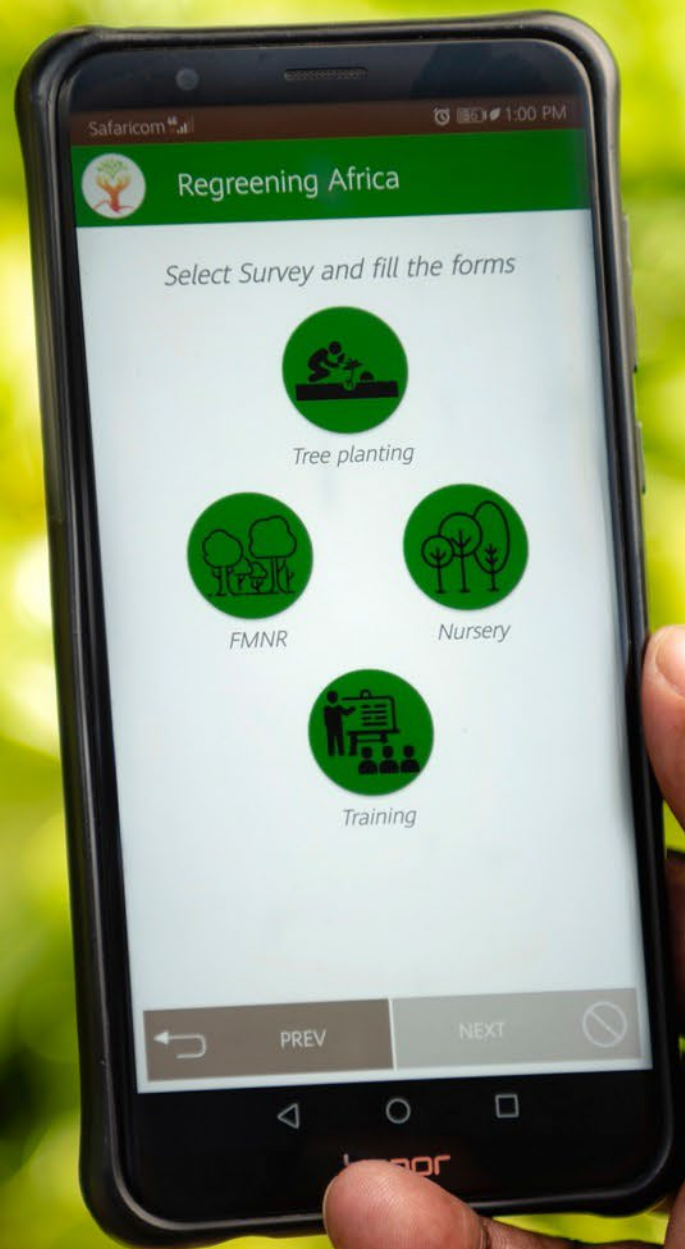

Medicinal
Fodder
Moringa
Soumbala Myrrh
Poles Shear Charcoal Fuelwood
Zizyphus Fruits Balanites
Bamboo Beekeeping Baobab Timber
Gesholeaves Firewood
Seedlings
Frankincense

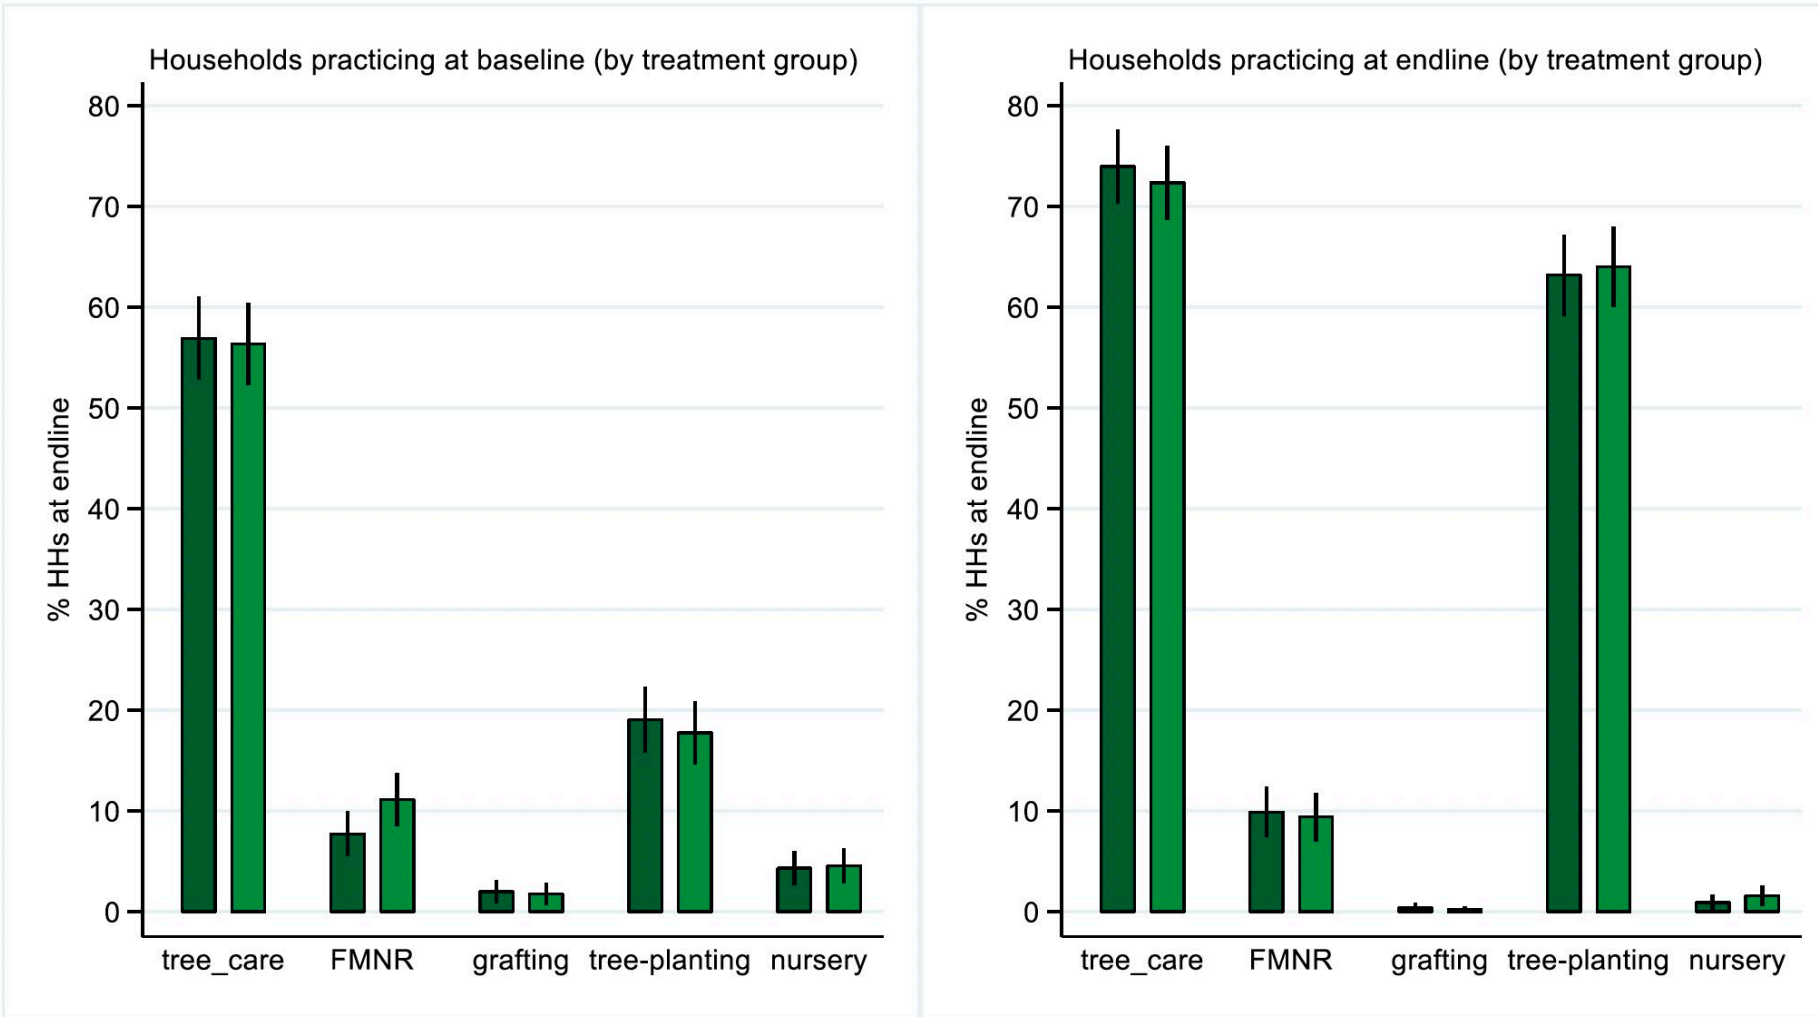

Lesson 3

Measurement is critical

Practice of regreening initiatives at baseline by treatment group

Households practicing different regreening activities at baseline

Year 4 (N=557)
 Year 1 (N=575)

Tree planting increased significantly between baseline and endline

 Slightly higher among households in treatment sites

 FMNR practice barely changed
 Less tree grafting and involvement in nursery at endline

**Land Degradation
Surveillance
Framework (LDSF)
Land health data
and at high
accuracy**

FMNR - species

- Users walk the boundary of fields with tree planting or FMNR interventions and submit geo-tagged field polygons.
- Farm polygons can then **overlaid onto maps of land cover and land health** allowing us to assess the effectiveness of these interventions on multiple aspects of land health.
- Potential applications of these assessments include soil carbon monitoring, relating directly to climate neutrality goals, etc.
- Also, biodiversity within farming systems can be assessed and tracked.

When you select a project area from the dropdown list above, a heatmap will also be shown on the map. This shows where the Regreening Africa App is being used to track tree planting activities. Also, other graphics on this page will update to reflect the area selected (if data is available for this area).

Highlights

Results of Monitoring and Evaluation (MEL) surveys Regreening Africa App Soil and land health Vegetation cover and land surface temperatures

Lesson 4

Data should be accessible and available for adaptive management

Joint Reflective Learning Missions: Integrating evidence, supporting adaptive management

Lesson 5 Partnerships and inclusion

Including and
empowering youth
and women

2019

Develop guideline on agroforestry based on agro-ecological zone – led by RWFA in partnership with RAB, NAEB, UR, ICRAF, other NGOs and CBOs involved in agroforestry

Disseminate of agroforestry guidelines to the farmer level (until 2020) – led by RAB, involving MINALOC, RWFA, CSOs, WVR, ICRAF, NGOs involved in agroforestry

Create a sub-sector working group (until 2020) – led by RAB in partnership with NGOs, MINALOC, CSOs

Note: the group discussed that as long as the Agroforestry Strategy has detailed actions, there is no need for an agroforestry policy

Conduct a baseline assessment covering existing agroforestry research, gaps, needs and practices and stakeholders. Identify farmers' constraints and coping strategies and identify options for different zones and conditions (socio-economic) including the level of investment intensity needed and different sectors inputs. Led by MOE and MINALOC

Develop tools and a timeline for monitoring, including identification of replicate sites (2019-2020)

Capacity building of stakeholders (2019-2021)

Establish M&E committees at district level (2019-2020)

Data collection analysis. Capture of agroforestry success stories for dissemination

Develop a decision dashboard for both socio-economic and biophysical data for use in dialogue and decision making – led by RWFA with MINAGRI, ICRAF

For all, actions partners are: MOE, MINAGRI, ICRAF, MINICOFIN, UR, VAF, IUCN, ARCOS, RECOR, FAO, WVR, and others

Establish an inter-ministerial committee (IMC) or task force – led by MOE with MINAGRI and MINALOC

Develop policy brief for donors and government, including a cabinet paper – led by NAFSP, IMC, MOE

Mapping of actors in agroforestry by MOE

Hold national agroforestry advisory committee meeting by January 2019 – led by RWFA

Agroforestry action plan with clear indicators prepared by February 2019 – IMC

District agroforestry technical committees established – led by director of Agriculture and Natural Resources with local and international NGOs, RAB, Universities by March 2019

Develop district target and action plans on agroforestry - led by DJAF by April 2019

Assess funding gap and proposed development - in January 2019

Develop partner, district, sector, cell, village and farmer promotion AF performance contract for 2019/2020 fiscal year by July 2019 – led by IMC and MOE

Enhance outreach by increasing communication through community radio, establishing community demonstration plots and recognising best performers through performance evaluation – led by implementing organisations

Decentralise seed/tree centres so that high quality seedlings are available near the farmers

Produce agroforestry extension materials in local language and distribute to farmers – led by ICRAF, RWFA, RAB, NGOs, MINAGRI

Incorporate agroforestry component in existing groups, land, environment committees – led by districts and NGOs

2020

Promote research on agroforestry to support evidence based actions (2019-2024) – led by RAB and RWFA in partnership with ICRAF and UR

Market analysis of potential value chains to orient decision making and solutions

Enabling farmer cooperatives to improve their efficiency (ie management models)

Community based tree and crop improvement

Assess available capacity in the agroforestry sector to identify gaps (2019-2020) – led by RWFA, districts, MINAGRI, RAB and NAEB

Research on agroforestry genetic resources yearly

2021

Develop the National Fruit Strategy (2020-2021) – led by MINAGRI in partnership with RWFA, NAEB, ICRAF

On farm research, at the local level, to enhance adoption

Identify most adaptive tree species for each agro ecological zone for diversification of agroforestry

Capacity building for agroforestry extension staff and lead farmers through formal trainings to available staff and volunteers, exchange visits (2019-2021) led by NGOs

2022

Conduct strong extension to the community on agroforestry/ multi-purpose trees and shrubs and their uses

Avail seedlings to the community – led by local government and civil society

The Regreening Africa project will support coordination of Agroforestry actors, support in the development of extension materials and monitoring approaches, including development of a decision dashboard.

Key:

- Creating policy and institutional framework for agroforestry
- Coordination mechanisms for operationalizing the agroforestry strategy
- Diverse agroforestry options for different landscapes and people
- Evidence, monitoring, evaluation and learning
- Strengthening communications and extension

Acronym glossary:

ARCOS	Albertine Rift Conservation Society	MINECOFIN	Ministry of Finance and Economic Planning
CBOs	Community Based Organisations	MOE	Ministry of Environment
CSOs	Civil Society Organizations	NAEB	National Agricultural Export Board
DJAF	District Joint Action Forum	NGOs	non-governmental organisations
FAO	Food and Agriculture Organization of the United Nations	RAB	Rwanda Agriculture Board
ICRAF	World Agroforestry Centre	RECOR	Rwanda Environmental Conservation Organization
IMC	Inter-Ministerial Task Force	RWFA	Rwanda Water and Forestry Association
IUCN	International Union for Conservation of Nature	UR	University of Rwanda
MINAGRI	Ministry of Agriculture and Animal Resources	VAF	V Agroforestry
MINALOC	Ministry of Local Government	WVR	World Vision Rwanda

SHARED workshop in late 2018 at the start of the project

Summary

Lessons from Regreening Africa

1. Match practices to context
2. Drivers and incentives
3. Monitor
4. Data based decisions and adaptation
5. Partnerships and inclusion

We are building on the work from the past 4 years (and more)

Thank You! Merci! Asante!
